

CIS/4 Cloud – E-Invoicing: Master complex invoicing processes – open up new business opportunities

The introduction of E-Invoicing presents companies with the challenge of digitally mapping complex invoicing processes. This requires not only a deep understanding of existing processes, but also the expertise to digitise them efficiently and in compliance with legal requirements. The complexity of invoicing processes and the necessary specialist knowledge make e-invoicing a challenging but rewarding step towards efficient business processes.

Digital invoicing processes are now handled in almost every country using different invoice formats and transmission channels. The European standard for electronic invoicing (EN16931) is implemented in national laws, such as the 'Growth Opportunities Act'. These legal requirements and regulatory details vary greatly from country to country and are constantly changing.

For example, the various EU member states use their own standards – such as ZUGFeRD and XRechnung in Germany or FatturaPA in Italy. These international differences make electronic invoicing increasingly complex.

Flexible integration with our cloud-based solution

To enable fully automated electronic document exchange and the smooth transfer of large amounts of data, middleware is required that can handle all API and EDI scenarios and thus also has access to Peppol. Peppol (PanEuropean Public Procurement OnLine) is a cross-border network that enables standardised document transfer to all other registered business partners via an access point. This is particularly important for public procurement in the EU, as this is increasingly being handled exclusively via Peppol.

But what can be done if the existing (ERP) system cannot provide the required XML format and does not offer a suitable interface? CIS/4-Cloud – E-Invoicing provides a solution, allowing invoice processes to be digitised for any invoice format (in-house, EDIFACT, PDF, etc.) and any business relationship (B2G, B2B, B2C).

Based on many years of experience in the field of EDI integration, CONCETO has developed a highly specialised e-invoicing solution that is precisely tailored to the needs of small and medium-sized enterprises. CIS/4-Cloud - E-Invoicing bridges the gap to your system while expanding your options: electronic invoices, whether ZUGFeRD or XRechnung, are reliably created, validated and processed without media discontinuity. With the ready-made integration modules, this solution can be immediately applied to other companies, European countries and the invoice formats required there.

CIS/4 Cloud – E-Invoicing brings you these advantages

The development of practical solutions and their integration into a wide variety of (ERP) systems are among CONCETO's core competencies. Over the years, we have built up a wealth of experience in the field of EDI, which includes supporting both national and international companies. As a result, customers benefit from the following advantages with CIS/4-Cloud – E-Invoicing when it comes to E-Invoicing:

- Fast and legally compliant implementation of all national requirements
- Quick and easy entry into CIS/4 Cloud without tedious installations or additional tools
- Maximum flexibility in terms of the underlying data format (in-house, EDIFACT, PDF, etc.) and transmission channels (e.g. email, X.400, AS2)
- Transparent billing with our pay-as-you-go model
- 360° view of all invoicing processes with our business monitoring
- Future-proof despite constantly changing legal requirements

CIS/4 Cloud – Our future-proof cloud solution for E-Invoicing

Implementing E-Invoicing requirements demands speed, scalability and security, as legal requirements often change at short notice and must be met within specific deadlines. With an experienced partner such as CONCETO, these requirements can be met smoothly. Making the necessary adjustments to existing, conventional invoicing processes is often only possible to a limited extent or involves a great deal of effort. This calls for a flexible cloud solution such as CIS/4-Cloud – E-Invoicing, which complements the current situation in an uncomplicated and cost-effective manner and keeps you up to date despite changing legal requirements.
